EDUCATION

Iowa State University | *Ames, IA* *Expected December 2026*

- B.S Software Engineering, Minor in Hospitality Management

EXPERIENCE

Delta Air Lines | Data Management Co-Op | *Atlanta, GA* *May 2026 – August 2026*

- Cut metric turnaround from 24+ hours to on-demand for 20+ teams globally by building API-based extraction from legacy systems into the data lakehouse with 3 IT teams
- Defined build scope by conducting 30+ stakeholder interviews across 14 business units, translating use cases into technical specifications
- Designed the ingestion pipeline and access patterns from scratch, scoping the build to 800K+ records annually and replacing manual snapshots that varied team to team

Delta Air Lines | Product Management Co-Op | *Atlanta, GA* *January 2025 – August 2025*

- Eliminated 800+ manual work hours per month, driving ~$150K in projected annual savings, by shipping automation that filtered cases not requiring manual review from a 40+ person review queue
- Owned the product end to end across 5 build iterations with IT, gathering requirements, writing user stories, and prioritizing backlog to ship in 4 months
- Built KPI dashboards in SQL, Excel, and VBA on case throughput, used by IT and leadership to track queue volume and allocate review resources

Iowa State University | Software Engineering Teaching Assistant | *Ames, IA* *August 2025 – May 2026*

- Taught programming fundamentals and team-based project practices to 70+ first-year students, leading a weekly lab section across 2 semesters
- Partnered with faculty to improve course materials and lab instruction across multiple sections.

Sukup Manufacturing Co. | Software Engineering Intern | *Sheffield, IA* *May 2023 – August 2023*

- Cut inventory lookup and manual data entry time by 70% by building a SQL-based search tool, validated through testing against the existing process
- Reduced documentation and reporting effort by 35% by automating exports and distribution of SolidWorks technical documentation to international manufacturing partners

PROJECTS

Flight Delay Prediction Agent | *Python, Google ADK, Vertex AI (Gemini)* *May 2026*

- Built a ReAct agent that answers natural-language flight operations questions via parallel retrieval from flight, weather, and FAA APIs, grounding responses in live operational data.
- Architected a hybrid decision system where an LLM handled retrieval and explanation while a deterministic scoring engine generated auditable delay-risk predictions.
- Developed an evaluation framework with regression test sets, ADK tracing, and response caching to validate prompt/tool changes while reducing latency and API costs.

SKILLS

AI & ML: LLM Evaluation, Prompt Engineering, Agent Workflows, AI Product Strategy

Product: PRDs, Requirements Gathering, User Stories, Roadmapping, A/B Testing, User Research, Stakeholder Management, Agile/Scrum, Figma

Data & Analytics: SQL, Excel, VBA, Tableau, Power BI, Data Modeling, KPI Reporting, Data Pipelines

Languages & Tools: Java, Python, C, C++, JavaScript, Spring Boot, React, Node.js, MongoDB, System Design
