EDUCATION

Iowa State University | *Ames, IA* *Expected December 2026*

- B.S. Software Engineering, Minor in Hospitality Management

EXPERIENCE

Delta Air Lines Atlanta, GA

Data Management Co-op *May 2026 – August 2026*

- Defined build scope by running 30+ stakeholder interviews across 14 business units, turning conflicting team needs into a single set of technical requirements
- Cut metric turnaround from 24+ hours to on-demand for 20+ global teams by driving API-based extraction from legacy systems into the data lakehouse, coordinating across 3 IT teams
- Designed the ingestion pipeline and access patterns for 800K+ records annually, replacing manual snapshots that varied team to team with one standardized source

Product Management Co-op *January 2025 – August 2025*

- Eliminated 800+ manual hours per month (~$150K projected annual savings) by shipping automation that removed cases not needing human review from a 40+ person team's queue
- Owned the product end to end across 5 build iterations with IT, gathering requirements, writing user stories, and prioritizing the backlog to ship in 4 months
- Built KPI dashboards in SQL, Excel, and VBA tracking case throughput, used by IT and leadership to monitor queue volume and allocate review resources

Iowa State University Ames, IA

Software Engineering Teaching Assistant *August 2025 – May 2026*

- Taught programming fundamentals and team-based project practices to 70+ first-year students, leading a weekly lab section across 2 semesters
- Partnered with faculty to improve course materials and lab instruction across multiple sections

Sukup Manufacturing Co. Sheffield, IA

Software Engineering Intern *May 2023 – August 2023*

- Cut inventory lookup and manual data entry time by 70% by building a SQL-based search tool, validated through testing against the existing process
- Reduced documentation and reporting effort by 35% by automating exports of SolidWorks technical documentation to international manufacturing partners

PROJECTS

Flight Delay Prediction Agent | *Python, Google ADK, Vertex AI (Gemini)* *May 2026*

- Built a ReAct agent that answers natural-language flight operations questions via parallel retrieval from flight, weather, and FAA APIs, grounding responses in live operational data
- Architected a hybrid decision system where an LLM handled retrieval and explanation while a deterministic scoring engine generated auditable delay-risk predictions
- Developed an evaluation framework with regression test sets, ADK tracing, and response caching to validate prompt/tool changes while reducing latency and API costs

SKILLS

AI & ML: LLM Evaluation, Prompt Engineering, Agent Workflows, AI Product Strategy
Product: PRDs, User Stories, Roadmapping, A/B Testing, User Research, Agile/Scrum, System Design
Data & Analytics: SQL, Excel, Tableau, Power BI, Data Modeling, KPI Reporting, Data Pipelines
Languages & Frameworks: Java, Python, C, C++, JavaScript, VBA, Spring Boot, MongoDB, Node.js, React
